

How to Set Up FTC Internet in Your Camper

1

FTC requires **ALL** camper customers to have a **wooden 4x4 post** outside the camper to have the fiber mounted on.

2

If you prefer the router inside the camper, you are responsible for providing a **¾ inch conduit** from the post to the camper and **leaving a pull string** for us to attach the fiber during installation.

3

If it's a temporary home, customers can place the router outside in a **weatherproof plastic box**, mounted on the post with an **electrical plug** for power. These can be found at most hardware stores or through the QR code.

SCAN TO VIEW WEATHERPROOF
BOX ON AMAZON

Dimensions for weatherproof
plastic box should be no
smaller than **16x14x8**.
