

How to Resolve the Roku 3 Interference Mitigation Issue

Roku will grab the same Wi-Fi channel as the nearest Wi-Fi access point (e.g. yours). It will broadcast a Wi-Fi Direct SSID *DIRECT-roku-123-A2* or "Hidden" on the same channel. It will increase its power to stay above your access point if you up the transmit power.

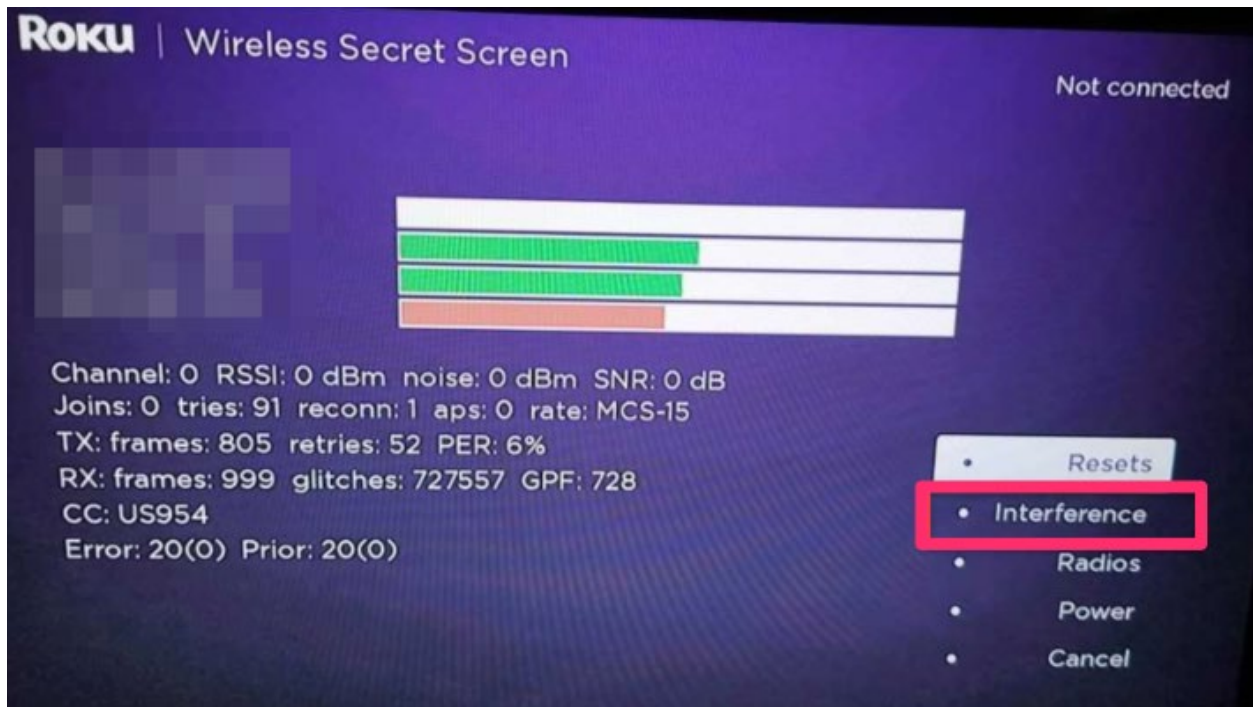

The Roku has interference mitigation enabled by default. This is technology which **deliberately disrupts traffic to nearby Access Points** to attempt to improve local traffic.

How to resolve:

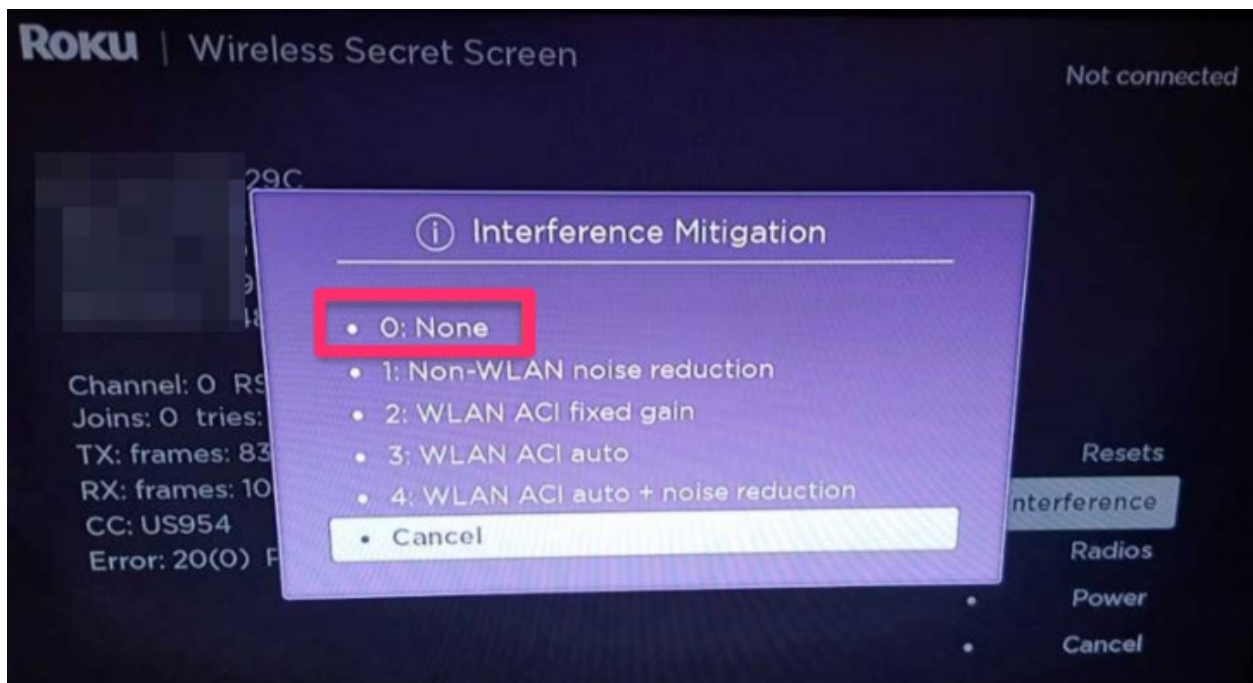

- Start up the Roku and get to the home screen
- Press these 10 buttons quickly: HOME-HOME-HOME-HOME-HOME-FFWD-PLAY-REWIND-PLAY-FFWD
 - The HOME button is the button with a picture of a house.
- Select "Wireless Secret Screen" from the menu choices

- Select "Interference" from the menu choices.

- Choose "None" from the menu.

- This should resolve the issue. You do NOT need to reboot the Roku.
